INSTALLATION

# Specification Check

Before installation,

Bike Frame: BB30

Twist-Fit Type Inner Diameter: 42mm Width: 68mm

Crank Spec: Shimano HT II: Ø24mm **SRAM DUB:** Ø28.99mm ROTOR 3D+:

Ø30mm **V** 

## BB BB30 Anatomy Before installation, please ensure that the purchased BB meets the following specifications and includes the following contents.

### To install TRiPEAK Bottom Bracket, we strongly recommend that you have a trained bicycle mechanic at your local bike shop.

- Do not alter this product in any way as it can cause unseen damage. Any modifications to this product will void the warranty.
- Make sure the crankset is firmly attached to the bottom bracket, Improperly attached cranks can become detached from the BB set.
- When cleaning the bottom bracket set, only use mild soap and water. Never use high-pressure water jet, It will cause BB cup internal water
- If you have any questions or concerns about this product, Please feel free to contact us. E-mail:info@tripeakbearing.com
- Required Tools TRIPEAK Tool Required: B015

ingress and influencing the bearing rolling lifetime.

**BB Tool** 

Remove the drive-side BB, which will be installed later.

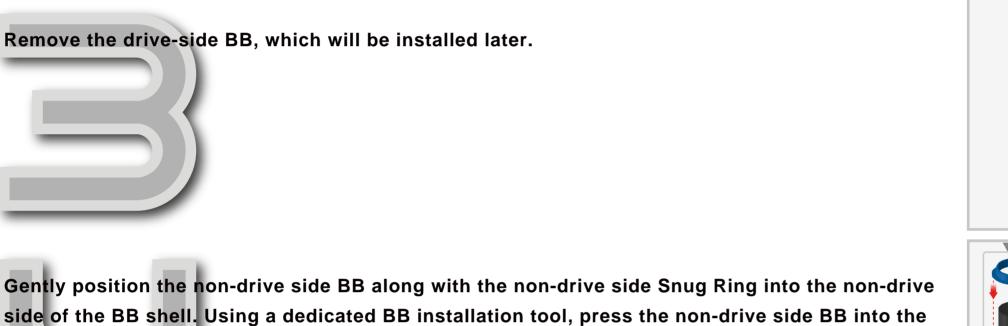

#### gently by hand to ensure the lubricant is evenly distributed. Carefully press the seals back into place on the bearings, ensuring they are seated properly and

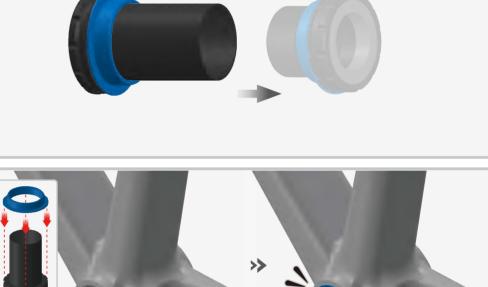

securely. After reassembly, check to ensure the bearings move smoothly and without resistance.

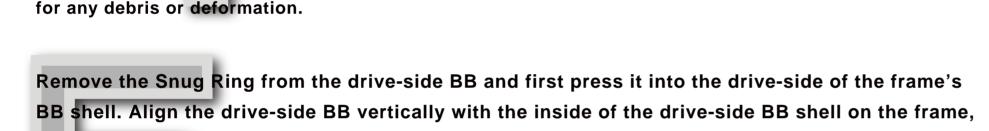

Ensure that the internal cable routing of the frame will not interfere with the bottom bracket

(BB) installation. Clean the inside of the BB shell on the frame, ensuring it is smooth and free

of debris. Apply a thin layer of grease to the inner edges of the BB shell to assist with smooth BB installation.

and rotate it counterclockwise to insert. Then, use the BB wrench (B015) to fit the drive-side BB

ensuring there is no gap between the BB and the frame's BB shell, completing the BB installation.

shell, continuing to rotate counterclockwise to press it in. Tighten to a torque value of 30Nm,

During pressing, ensure the BB is inserted at a proper vertical angle to the frame. If you encounter excessive resistance while pressing, stop the process and recheck the insertion angle and the BB shell

BB shell of the frame until there is no gap between the BB and the frame.

If the non-drive side BB rotates along with the drive-side BB during installation, prepare another BB wrench (B015) to secure the non-drive side BB in place, ensuring the required torque value is reached. Installation of Crank's Adapter
